

AI-powered weighing solutions

Electronic weighing solutions for modern retail

AI-powered weighing solutions – fast, accurate, and more efficient

Traditional weighing processes have long been a bottleneck in retail. Slow weighing, manual PLU entry, and error-prone workflows lead to customer frustration and operational inefficiencies.

- Faster weighing and shorter queues
- Automatic product recognition without PLU codes
- Lower training and labor costs
- Reduced errors, shrinkage, and label costs

AI-powered weighing solutions

Our AI weighing systems – including AI label printing scales, AI cashier scales, AI POS terminals, base stations, and electronic price tags – integrate seamlessly into existing retail environments. Supported by intelligent software modules and a centralized Scale Management System, weighing becomes a fully automated, data-driven process.

Powerful technology inside

With dual-core CPUs and up to 3.0 TOPs of NPU computing power, the systems process data at lightning speed. Fresh products are identified within 0.2 seconds with over 99% accuracy, even when packed in transparent bags.

Clear benefits for retailers

Retailers benefit from lower labor costs, reduced training requirements, and higher throughput. Errors and shrinkage are minimized, while customers enjoy faster checkouts, consistent quality, and clear product information.

“With AI weighing solutions, retailers turn a pain point into a competitive advantage.”
