

Pusher Systems

Pusher Systems – 100% product visibility without losing shelf space

Smarter shelves for every store

Pusher Systems keep products perfectly front-facing and fully visible. This smart shelving solution is ideal for drugstores, supermarkets, convenience stores, discounters, garden centers, DIY stores, and brand shops. Pushers deliver flawless presentation without sacrificing shelf height or capacity.

- Always front-facing products without manual fronting
- No loss of shelf height or selling capacity
- Up to 1.5 hours of labor savings per product group per day
- Higher sales through better visibility and order

Optimized convenience store service

Convenience shoppers have only a few minutes to find what they need. If products are hard to locate, sales are lost. Pushers automatically move each product to the front, keeping shelves neat, full, and attractive while staff focus on customers.

Maximum visibility without losing space

Unlike roller systems, pushers require no additional height. They are ideal for tall packages or compact shelf compartments. Every product remains visible on the front row, avoiding empty-shelf impressions that damage shopper trust.

Efficiency & flexibility

Retailers save an average of 1.5 labor hours per day per category with pushers. Ultra-thin dividers allow fast reconfiguration for changing assortments or seasonal promotions. All packaging types remain upright and sales-ready.

“With pushers, our shelves are always organized and customer-ready, without wasting space. – Store Manager”
